-

Coming from a trades background I learned to be a very strong problem solver! The linear thinking and problem solving aspect of coding fascinates me. I can spend hours wrapped up in a problem and not even notice. In my spare time I like solving algorithm problems and learning about how technology works. My favorite way to cement this knowledge is to immediately build a project with the new skill or knowledge I am learning.

## EXPERIENCE

---

### Junior Developer | 7Cheetahs Trading

JAN 2020 - AUG 2020, KELOWNA, BC

- Built internal software to monitor algorithmic decision making of the companies lead revenue source.
- Developed an MVC to interface with multiple internal databases.

## EDUCATION

---

### BrainStation | Diploma Candidate, Web Development

FEB 2021 - MAY 2021, REMOTE

### Okanagan College | Red Seal, Electrician Certification

OCT 2018 - DEC 2018, KELOWNA, BC  
Dean's List

## SKILLS

---

Python, Javascript, Java, Algorithms and Data Structures, APIs, Flask, HTML5, CSS, React.js, Node.js, User Auth, Express.js, GitHub, MongoDB, MySQL

## PROJECTS

---

### [Sudoku](#) | Codesmith

Created a client side sudoku game that generates unique puzzles each game with an option for an algorithm to solve it for you. The game validates all moves and notifies the user if anything is incorrect.
