Deployment & Development Tools: Heroku, GitHub, WebPack

Data Analytics: Tableau, PowerBI, Microsoft Office

ERP: Syspro, SAP

PROFILE

During my time at BCIT, I got to learn a lot about technology that businesses use nowadays (from ERP systems, data analytic tools, to web development). And I found my passion for programming when I was writing my first web using ASP.Net Core. Since then, I started learning some programming languages during my free time.

William Doan

Business IT Grad, IT Consultant, Web Developer

I was introduced to programming in late 2018, from then I've learned many technologies (data analytics, web dev), programming languages (Python, SQL, Javascript) both on-campus and my free time. I've also done consulting and developed a website for a company during my time at BCIT, and it took me around 3 months to finish the project (including the consulting, learning, and developing phase). "Strive to be better than you were yesterday" has always been my guideline in my learning journey.

Project-X

Whether you're looking for projects written in a specific language, looking for inspiration for your next project, or sharing your thought about the specific projects with your fellow developers, Project-X will make it all possible for you. Not only that, but you can also save your favorite projects for your future references.
