SKILLS

Python, R, SQL, Java, Bash, Tableau, SPSS, Brain Vision Analyzer, Microsoft Office, Google Drive

PROFILE

Data science candidate with a psychology background seeking junior data scientist roles. Through my previous experience as research assistant, I was able to develop critical thinking skills, with an understanding of how to frame and tackle problems. I am interested in the intersection between data science and health, and how to generate insights to help companies grow, and to improve people's health.
